

PINEAPPLE

Pineapple juice and Pineapple juice concentrate are two of the many types of commercial-grade products supplied by iTi Tropicals.

Fruit Overview:

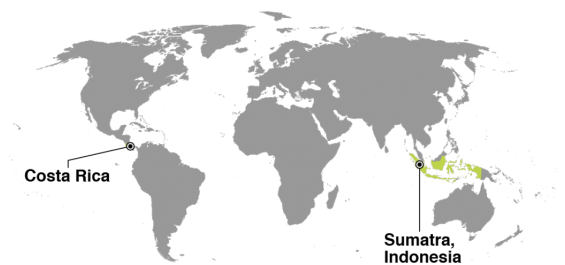

A symbol of hospitality, pineapple is a popular tropical fruit and known worldwide for its taste and aromatic flavor. Although it is native to the southern part of Brazil and Paraguay, it can also be found in tropical regions around the world such as Costa Rica, Guatemala, Honduras, and Trinidad. Pineapple is the second most widely consumed tropical fruit in America and is loved throughout the world. Pineapple brings a tropical flair to any product while still providing a familiar flavor profile.

Food Application:

Pineapple can be incorporated in a wide variety of applications such as tropical drinks, cocktails, smoothies, yogurts, ice creams, sherbet, jellies, marinades, and sauces. It can be enjoyed directly as a juice or fruit and/or can be readily blended with other fruits including coconut, mango, banana, orange, and others. It also blends very well with vegetables. Pineapple's strong flavor balances the bitter notes associated with vegetables giving the finished product a fruity taste.

Available Product:

iTi supplies frozen and aseptic pineapple juice and pineapple juice concentrate. The products are 100% natural, GMO free, and produced from fresh, ripe, carefully selected fruit. They do not contain any artificial color, flavors, or preservatives and are processed in FDA registered facilities, which are HACCP and Kosher-certified.
