

# GUAVA

**Guava puree and guava concentrate are two of the many types of commercial-grade products supplied by iTi Tropicals.**

**Fruit Overview:**

Found in many tropical and subtropical countries, Guavas are a delicious exotic fruit low in calories, filled with Vitamins C and A, and are known for being a powerful antioxidant and anti-inflammatory agent. Guava is also regarded as a “super fruit.” Ripened guava has a strong, sweet, musky scent, but its sweetness and acidity is well-balanced. It is very tropical in flavor, similar to a mixture of pear, quince, and fig.

**Food Application:**

Guava blends very well with other fruits including mango, peach, and passionfruit. In recent years, guava has grown in culinary importance because it can be used to make many candies, preserves, jellies, jams, marmalades, and can be added to beverages for flavor. Guava is also used in various breakfast and dessert treats like ice creams and cereal bars and is a staple in many ethnic markets. Pink guava is used as the base for savory products such as sauces, constituting a substitute for tomatoes. It is a fruit that will diversify any product lineup.

**Available Product:**

iTi now supplies aseptic pink guava puree and aseptic pink guava concentrate. The products are 100% natural, GMO free, and produced from fresh, ripe, carefully selected fruit and do not contain artificial color, flavors, or preservatives. They are processed in FDA registered facilities, which are HACCP and Kosher-certified.
