

# BANANA

Banana puree is one of the many types of commercial-grade products supplied by iTi Tropicals.

**Fruit Overview:**

Grown in tropical regions throughout the world and native to India, Brazil, China, Ecuador, and the Philippines, fresh bananas are one of the most widely produced fruits. Available year-round, bananas are the number one fresh fruit consumed in the United States. Bananas are 99% fat free and are a source of essential minerals such as potassium and manganese, vitamins such as vitamin C as well as dietary fiber. They are also exceptionally rich in fructo-oligosaccharides, which are recognized for their prebiotic qualities.

**Food Application:**

Its widely accepted flavor makes the banana easy to be used in any number of food applications from fruit salads, smoothies, ice cream, pancakes, baked goods, juice applications, baby foods, and more. Popular combinations include açai-banana, and passionfruit-banana.

**Available Product:**

iTi supplies acidified banana puree, non-acidified banana puree, banana puree with and without seeds, organic banana puree, and 70 brix clarified banana juice concentrate. All iTi banana products are 100% natural, GMO free, and produced from fresh, ripe, carefully selected fruit. They do not contain any artificial color, flavor, or preservatives and are all processed in FDA registered facilities which are HACCP and Kosher-certified. Organic banana puree is also available.
